An eyeshield (10) for protecting babies' eyesight during phototherapy treatment for neonatal jaundice includes a strap (11) of soft material sized and shaped to pass around and secured to the head of the baby. An eye pad (18) is attached or formed integrally with the strap (11). A tab (13) extending from the strap (11) adjacent to the eye pad (18) can be grasped to aid in positioning the eyeshield (10) such that the eye pad (18) lies over the baby's eyes.
